

STORY OF IMPACT • 2025 → 2026

Wayman didn't inch forward. It *climbed*.

In a single year, Wayman lifted its state grade from an **F to a D** — a **61% jump** in total points — powered by reading and science. Here's what changed, why it worked, and where the Eagles go next.

FLORIDA STATE GRADE

+0%

GROWTH IN ONE YEAR

THE STARTING LINE

A hard road, and a school that refused to coast.

On Jacksonville's Westside, Wayman Academy of the Arts teaches roughly **150 K–5 students** — **every one of them from an economically disadvantaged home**. In 2025 the state's report card read a single letter: **F**. 127 points. 21%.

What happened next wasn't luck, and it wasn't a testing fluke. It was leadership willing to be coached, teachers willing to change how they work, and a relentless focus on what students could do *next*.

Four of six components rose. Three of them soared.

Florida builds a school's grade from six point totals. Here's how Wayman moved on each one, 2025 to 2026 — the dashed outline is where the school started, the solid bar is where it landed.

STATE GRADE

F → D

Told honestly: **the two math components dipped slightly** (-2 and -4). That's not a footnote to bury — it's the clearest map of where next year's growth comes from. Everything else on the board proves the model works when a subject gets focused attention. Math is next in line.

THE SIGNATURE WIN

Science more than *tripled* — in about a quarter.

When focused work met the science block, the payoff was fast:
from in roughly three months. It's the proof point for

everything else — concentrated effort, tracked closely, turns into measurable gains in a single grading window.

BEHIND THE NUMBERS

What actually moved the needle.

A grade doesn't jump 61% by accident. Three disciplines drove it — and each one is now built into how the building runs.

Discipline 01

Two years of executive coaching

Coaching centered on climate and culture reset how the school operates day to day. Its by-product — a climate-and-culture assessment worth running twice a year — is now a repeatable tool, not a one-time event.

Discipline 02

Professional development that stuck

A new module-internalization structure gave teachers a shared way to internalize lesson plans and track student data — so strong instruction stopped being accidental and started being the standard.

Discipline 03

Data as a daily habit

Leadership began connecting classroom data to annual accountability, building toward a simple standards-mastery picture for every grade and every subject — the foundation the next climb stands on.

WHAT COMES NEXT

The climb from D to C is already mapped.

Momentum is the hard part, and Wayman has it. These are the moves that turn a one-year jump into a multi-year trajectory.

01 Make climate & culture a rhythm

Run the climate-and-culture assessment twice a year, and let the data drive what happens next — not just measure it. What worked this year gets a repeatable cadence.

02 Build the team on its strengths

A StrengthsFinder assessment for leadership — and, given how small the staff is, for the whole team — helps a tight group work even tighter. A free Myers-Briggs-style tool is a no-cost starting point.

03 One data plan, tied to accountability

A focused, intentional tracking plan connected to annual results — anchored by a simple standards-mastery frame across every grade and subject — so no student's progress is a surprise in April.

04 A platform students can grow on

A student technology platform plus real student-data reporting makes progress visible daily instead of annually — and gives teachers, families, and leaders the same clear picture.

05 Math is the next frontier — and it's budgeted smart

The one place the numbers slipped gets a dedicated, cost-conscious fix: a phased ST Math rollout that protects the budget while targeting exactly the two components that dipped.

Year 1 • Launch ST Math

Year 2 • Expand ST Math

THE BOTTOM LINE

The investment didn't just
hold the line. It bent the
trajectory upward.

An F became a D. Reading doubled and tripled. Science tripled in a single quarter. None of that happens without leadership willing to be coached and

a partner willing to stay in the work. The foundation is built — and this time,
everyone knows exactly how the climb is done.
